Rajat Rajendra Prabhu

GAMEPLAY PROGRAMMER

United Kingdom | rajatprabhudev.com | rajatprabhudev@gmail.com

Professional Summary

Gameplay Programmer with strong expertise in C++,Unreal Engine, C# and Unity, specializing in 3Cs (Character, Controls, Camera) and core gameplay systems. Proven experience in developing player mechanics, HUD, and ability systems across collaborative university projects and Game Jams. Skilled in source control (Git), debugging, and agile development. Passionate about delivering polished gameplay experiences through efficient coding, team collaboration, and continuous learning in real-time game development environments.

Academics

Bachelor of Science in Computer Games Design and Programming (First-Class)
University of Staffordshire, Stoke-On-Trent, United Kingdom
Graduated: June 2025
Key Modules: Gameplay Programming, Unreal Engine Development, Unity Engine Development, Advanced C++ Programming

High School Diploma in Computer Science (First-Class)
Delhi Private School, Sharjah, United Arab Emirates
Graduated: June 2022

Area of Expertise

- Gameplay Programming (3Cs: Character, Controls, Camera)
- Unreal Engine (C++ and Blueprints)
- Unity and C#
- Version Control using GitHub
- Project Management with Jira
- Microsoft Word, Excel, and PowerPoint

Volunteer Experience

Global Game Jam 2025
University of Staffordshire, Stoke-On-Trent
January 2025

- Collaborated with a small team to design and develop a complete game prototype in 48 hours, focusing on gameplay mechanics and UI implementation using Unreal Engine Blueprints.

Published games on itch.io showcasing practical skills in Unreal Engine, Unity, C++, and C# through solo and group projects.

Project Experience

Adhvan Game Studios – Gameplay(3C) Programmer
August 2025 – Present

- Designed and implemented core systems supporting movement and interaction in Unreal Engine C++, building scalable frameworks to AAA production standards.
- Built environment aware traversal logic, allowing the character to interpret and react to complex terrain at stable framerates.
- Developed adaptive camera systems integrated with gameplay states, delivering cinematic clarity and responsive player control.
- Profiled & optimised 3C systems with Unreal Insights, contributed to code reviews and interface definitions with design & engineering.

FlowState – University Project, Stoke-On-Trent
December 2024 – February 2025

- Engineered a modular movement framework enabling seamless transitions between multiple character states while preserving system scalability.
- Integrated motion matching animation pipelines to create fluid, responsive, and data driven character motion to use reliably.
- Implemented a branching interaction system that allows for defining player choices and outcomes without modifying core code.

Dose of Decay – Junior Collaborative Project, Stoke-On-Trent
March 2024 – May 2024

- Developed a data driven ability framework enabling designers to define, extend and balance gameplay actions systematically.
- Built a modular HUD and tutorial system reading from game data, allowing dynamic updates without modifying code.
- Collaborated with design and engineering teams to define coding standards, interfaces

Bubba's Power Nap – Global Games Jam, Stoke-On-Trent
January 31 – February 1, 2024

- Developed core gameplay systems for movement, environmental interaction, and hazards, creating a flexible foundation for rapid iteration within a 48-hour timeframe.
- Designed and implemented UI systems including menus, player HUD, and dynamic feedback elements, ensuring clarity for the player.
- Maintained version control and collaborative workflows via GitHub, supporting multi-discipline team coordination under tight deadlines.
